

DO MY SYSTEMS ACTUALLY WORK?

A 5-minute systems check for growing businesses.

Having software doesn't mean you have a system.

A good system should make work easier to complete, information easier to find, and your business less dependent on people remembering what happens next.

Answer YES or NO to each question.

01 — ENTER IT ONCE

When information enters your business, does it only need to be entered once?

Think: customer information, leads, orders, project details, inventory, payments.

☐ YES ☐ NO

If you're copying and pasting the same information between tools, your team is doing the integration.

02 — YOUR TOOLS TALK

Does information move between your important tools without someone manually moving it?

Think: website → CRM → project management → email → reporting.

☐ YES ☐ NO

Connected tools should remove steps—not create new ones.

03 — YOU CAN FIND THE ANSWER

Can someone find the current status of a customer, order, lead, or project without asking another person?

☐ YES ☐ NO

"Ask Sarah" is not a database.

DO MY SYSTEMS ACTUALLY WORK?

A 5-minute systems check for growing businesses.

Having software doesn't mean you have a system.

A good system should make work easier to complete, information easier to find, and your business less dependent on people remembering what happens next.

Answer YES or NO to each question.

04 — THE PROCESS EXISTS OUTSIDE SOMEONE'S HEAD

Are your important recurring processes documented well enough that someone else could follow them?

☐ YES ☐ NO

Your business shouldn't lose a process when someone goes on vacation.

05 — YOUR DATA ACTUALLY HELPS YOU

Can you answer your most important business questions without manually stitching together three reports and a spreadsheet?

☐ YES ☐ NO

Think:

What's selling?

Where are leads coming from?

What needs attention?

Where are we losing money or time?

Your data isn't very useful if finding the answer becomes its own project.

06 — THE BUSINESS DOESN'T DEPEND ON ONE PERSON

If one key person disappeared tomorrow, would your major processes keep moving?

☐ YES ☐ NO

People should run the business. They shouldn't have to hold the business together.

DO MY SYSTEMS ACTUALLY WORK?

HOW'D YOUR SYSTEMS DO?

0–2 YES

Your systems are probably creating work.

Your business may be running on people, memory, manual handoffs, and workarounds more than you realize.

Don't add another tool yet.

Start by identifying the one process creating the most repeated work.

3–4 YES

Some pieces are connected.

You've built a foundation, but there are likely gaps where information, responsibility, or work gets stuck.

Look closely at every question you answered NO to.

Those are your starting points.

5–6 YES

You're in pretty good shape.

Your systems are doing what systems are supposed to do: supporting the people using them.

Now the question becomes:

Will they still work this well as you grow?

BEFORE YOU GO...

Look at every question you answered NO to.

Then ask:

Is this a technology problem—or is the process itself the problem?

Because automating a messy process usually just gives you a faster messy process.

WANT THE BIGGER PICTURE?

Your systems are only one piece of the business.

The free Mosaic Clarity Check looks across your vision, customer experience, systems, operations, and growth to help you see where the pieces aren't connecting.
